Blue-Berry Chowk, Kharadi, Pune, Maharashtra [linkedin.com/in/saurabh-supe-1a9a1422a](https://www.linkedin.com/in/saurabh-supe-1a9a1422a)

TECHNICAL SKILL SET

Language: Java, SQL

Core Java: OOPs, Strings, Arrays, Collections Framework, Exception Handling, File handling, Multithreading, Java 8 feature

Advanced Java: JDBC, REST APIs

Frameworks: Spring Boot, Spring MVC, Microservices, Hibernate, REST Api, Kafka

Database: SQL, PL/SQL

Tools: Git (using SourceTree), Maven, Jaspersoft (IReport), Bitbucket, Jenkins, Docker, Jira

EDUCATION DETAILS

GH Raisonni Institute Of Business Management, Jalgaon,

Masters In Computer Application
2023

North Maharashtra University
CGPA:-8.12 RESULT 77.14%

K. Narkhede Vidyalaya, Bhusawal.,
Bachelors of science (Computer science)

2021
North Maharashtra University
CGPA:-9.83 RESULT 88.42%

SOFT SKILL

Self-Learner

Self-Learner with the ability to adapt to changing environment

Decision-Making Capabilities

Capable of making informed decisions and working both individually and in group settings

Communication Skill

Good written and oral communication skills

PROFESSIONAL SUMMARY

Software Engineer with 3+ years of experience in Java backend development, specializing in building scalable and data-intensive applications. Skilled in Core Java, JDBC, and Oracle SQL/PLSQL, with hands-on experience in query optimization and data processing. Familiar with the Spring framework (Spring Boot, Spring MVC) for developing RESTful APIs and modular applications. Experienced in build and dependency management using Maven and working with CI/CD pipelines using Jenkins and Git. Strong debugging and problem-solving skills with a proven ability to deliver reliable, high-quality backend solutions.

PROFESSIONAL EXPERIENCE

Software Engineer I, Quorum Software

01/2024 – Present

- Developed and maintained enterprise reporting modules within the Energy Components (EC) system using **Java, JDBC, and Oracle SQL/PLSQL**, processing large-scale datasets (100K+ records) across production, transport, sales, and revenue domains.
- Designed and optimized complex SQL queries (joins, aggregations, data transformations), improving query performance by **15–25%** and reducing report generation time.
- Implemented Java-based backend logic and extension-based solutions within the EC framework, enhancing system flexibility and supporting multiple client-specific workflows.
- Designed, customized, and delivered dynamic business and regulatory reports using **Jaspersoft**, reducing manual reporting effort by **~30%**.
- Investigated and resolved data inconsistencies through backend debugging and database analysis, improving report accuracy and reliability by **~20%**.
- Performed data validation and impact analysis for feature enhancements and defect resolution, contributing to improved system stability and reduced production issues.
- Participated in Agile development lifecycle including requirement analysis, estimation, sprint planning, and execution, ensuring timely delivery of features.
- Supported CI/CD and release activities including build automation (**Maven**), code merging, version control (**Git/Bitbucket**), tagging, and deployment using **Jenkins**, contributing to smoother and faster release cycles.
- Collaborated with cross-functional teams to deliver scalable, high-quality backend solutions, improving overall system performance and user satisfaction.

Software Engineer Intern, Quorum Software

11/2022 – 12/2023

- Assisted in the development and testing of software components, gaining hands-on experience with Java and Oracle SQL.
- Participated in Agile ceremonies and contributed to development and testing activities.
- Collaborated with senior developers to understand system architecture and reporting workflows.

AWARDS

High Five Award

04/12/2024

Remarkable ability to tackle long-standing dependency of RR Prod Norway on EC without testdata and resolved user keycloak configuration related roadblocks with each compatibility check.

Shining Team Award

27/02/2025

Exceptional commitment to teamwork in leading the regulatory reporting module during a critical transition.

LANGUAGES

English, Hindi, Marathi

PROJECT

Energy Component (EC)

Project Description:-

Energy Components (EC), is a premier enterprise-grade web application used in the oil and gas industry for hydrocarbon management, production tracking, and emissions reporting. It acts as a centralized system that integrates data from upstream (production), midstream (transportation), and LNG operations, enabling companies to manage the complete lifecycle of energy from reservoir to market. EC ensures data accuracy, automation, and real-time visibility across operations.

EC Reporting:-

The Reporting Module plays a critical role in transforming operational and production data into meaningful insights and regulatory reports. It supports:

- Daily and monthly well-to-market reporting.
- Regulatory and compliance reporting.
- Integration of production, allocation, and hydrocarbon accounting data.
- Automated generation of reports to improve accuracy and reduce manual effort.

Role & Responsibility :-

- Developed and enhanced backend reporting modules within the Energy Components (EC) system using Java, supporting large-scale data processing across production, transport, sales, and revenue domains.
- Worked with backend service logic aligned to REST-based architectures, with exposure to Spring framework concepts for building modular and scalable applications.
- Designed and delivered dynamic reports using Jaspersoft, integrating data from multiple sources to support business and regulatory reporting requirements.
- Implemented and optimized complex Oracle SQL/PLSQL queries (joins, aggregations) to improve data processing performance and ensure high data accuracy.
- Diagnosed and resolved backend and data-related issues through debugging and query analysis, improving system reliability and report correctness.
- Contributed to feature enhancements, defect resolution, and performance improvements across backend modules.
- Participated in Agile development lifecycle including requirement analysis, sprint planning, development, and testing activities.
- Supported CI/CD pipelines using Jenkins, including build automation (Maven), code merging, version control (Git/Bitbucket), and deployment processes.
- Collaborated with cross-functional teams to deliver scalable and maintainable backend solutions aligned with business requirements.

Technology and Tools Used :-

Java, Oracle SQL/PLSQL, Jaspersoft iReport, Jenkins, Bitbucket, Docker, Git Using Source Tree

✓ DECLARATION

I hereby declare that the information provided above is true and accurate to the best of my knowledge.
